

## A NOVEL ACNE SOLUTION

Introducing our **Microbiome balancer for acne-prone skin**, a groundbreaking microbiome balancer acne solution. This is a two-step skincare formulation that redefines the approach to acne treatment. Our commitment to preserving the delicate balance of your skin's microbiome sets us apart from competitors who often disrupt this essential ecosystem. Our approach utilizes bacteriophages in a precise manner, specifically targeting acne-inducing bacteria, while maintaining the overall health of your skin.

Embrace a skincare revolution with our microbiome balancer acne solution. Experience the power of exfoliation and targeted phage action working together to give you clear, healthy skin.

Microbiome balancer for  
acne-prone skin

## OUR MISSION

Our company is dedicated to revolutionizing health and well-being through innovative solutions grounded in the principles of probiotics and phage-based therapeutics. With a steadfast commitment to harnessing the power of beneficial microorganisms, we aim to develop and deliver cutting-edge products that promote a balanced and resilient microbiome. Simultaneously, we are leveraging bacteriophages to target and combat harmful bacteria, offering novel and precise interventions in the field of health and medicine. Through these objectives, we strive to enhance lives by fostering a targeted approach to wellness that embraces the symbiotic relationship between humans and the microorganisms that inhabit our bodies.

## HOW IT WORKS

Viruses like influenza have always been considered the human race's natural predator. But did you know that bacteria have natural predators too? They're called bacteriophages or phages for short! These tiny phages can bind and kill specific bacterial cells, while not harming or having any effect on our own human cells.

Today's acne treatment products contain many different toxic chemicals that can destroy our skin's microbiota, the healthy bacteria that protect our skin. Our lab has engineered a microbiota balancer that specifically targets the bad bacteria that cause acne!

Before

After

## TWO STEP SOLUTION

Step 1 of our solution features carefully selected exfoliating agents that serve a dual purpose – not only do they gently exfoliate the skin, promoting a smoother texture, but they also prepare the skin for the next crucial step. These exfoliating agents create a receptive environment, allowing the acne-targeting phages in Step 2 to penetrate the skin through the pores more effectively. This innovative combination ensures that our microbiome balancer works synergistically, delivering a comprehensive solution for acne without compromising the integrity of the skin's microbiome.

The acne phages in Step 2 are engineered to have no adverse effects on human cells, providing a gentle yet powerful solution for acne sufferers. Moreover, these phages are highly specific, leaving non-acne inducing bacteria unharmed, preserving the delicate balance of your skin's microbiome.
